154.507 Million cell updates/sec

Abular output not generated.

Title: >US-08-599-226-29
Description: (1-12) from USO8599226.pep
Perfect Score: 75
Sequence: 1 ASYLSTSSSLDY 12

Scoring table: PAM 150 Gap 15

earched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot37.\_\_\_\_

abase: swiss-prot37.

Statistics: Mean 25.063; Variance 28.009; scale 0.895

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN (POTENTIAL).
TISSUE SPECIFICITY: ABUTS THE DORSAL DPP-EXPRESSING CELLS IN A
LATERAL STRIPE 14-16 CELLS WIDE. LATER IN EMBRYOGENESIS IT IS
EXPRESSED IN NEUROECTODERM AND IN THE ENDODERM SPACED ALONG THE
ANTERIOR-POSTERIOR AXIS OF THE DEVELOPING GUT.
DEVELOPMENTAL STAGE: EMBRYOGENESIS.
SIMILARITY: TO XENOPUS DORSALIZING FACTOR CHORDIN.
SIMILARITY: CONTAINS 4 VWFC DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FUNCTION:

"A v-erbB-related protooncogene, c-erbB-2, is distinct from the c-erbB-1/epidermal growth factor-receptor gene and is amplified in human salivary gland adenocarcinoma.";

PROC. NATL. ACAD. SCI. U.S.A. 82:6497-6501(1985).

-I-FUNCTION: NEUREGULINS AND G930 ARE POTENTIAL LIGANDS FOR THIS RECEPTOR. NOT ACTIVATED BY EGF, TGF-ALPHA AND AMPHIREGULIN.

-I-CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE - ADP + PROTEIN TYROSINE PHOSPHATE.

-I-SUBCILIULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-I-SUBCILIULAR LOCATION: TYPE I MEMBRANE PROTEIN.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present sequence is a novel anti-human tumour necrosis factor alpha (TNF alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less and has a Koff rate constant of 1x10 power -3 m or less that the constant of 1x10 power -1 or less (both determined by surface plasmon resonance), and cless (both determined by surface plasmon resonance) and cless (both determined by surface plasmon resonance).

C cardiac or inflammatory bone disorders, bone resorption distances, clearons the detricts of control disturbances.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity

CC determining region 3 (CDR3).

CC The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or

CC less and has a Koff rate constant of 1x10 power -3 s power -1 or

CC less (both determined by surface plasmon resonance), and

neutralises human TNF-alpha cytotoxicity in a standard in vitro

CC L929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which

CC inhibits TNF-alpha activity, can be used to treat sepsis,

autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid

CC spondylitis, osteoarthritis, gouty arthritis, allergy multiple

CC syndrome, infectious diseases, malignancy, pulmonary, intestinal,

CC syndrome, inflammatory bone disorders, bone resorption disease,

CC syndrome, inflammatory bone disorders, bone resorption disease,

CC alcoholic, viral or fulminant hepatitis, coagulation disturbances,

CC burns, reperfusion injury, keloid formation, scar tissue formation,

CC pyrexia, periodontal disease, obesity and radiation toxicity. The

CC andothelial cells (HUVEC) (CIAM-1) on human umbilical vein
                                                                                                                                19-MAR-1998 (first entry)
Anti-TNF-alpha antibody heavy chain CDR3.
Human; tumour necrosis factor-alpha; TNF-alpha; antibody; CDR3; heavy chain; complementarity determining region 3; inhibition; treatment; sepsis; disease; autoimmune disease; infectious disease; malignancy; pulmonary disorder; intestinal disorder; hepatitis; cardiac disorder; inflammatory bone disorder; reperfusion injury; bone resorption disease; coagulation disturbance; bunn; ELAM-1; keloid formation; scar tissue formation; pyrexia; HUVEC; periodontal disease; obesity; radiation toxicity; endothelial cell leukocyte adhesion molecule-1; human umbilical vein endothelial cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Allen DJ, Hoogenboom HRJM, Kaymakcalan 2, Labkovsky B, Mankovich JA, McGuiness BT, Roberts AJ, Sakorafas P, Salfeld JG, Schoenhaut D, Vaughan TJ, White M, Wilton AJ; WPI; 97-415302/38.

High affinity antibodies against human TNF alpha - useful TNF alpha activity, e.g. to treat autoimmune diseases and Claim 20; Page 73; 102pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The Ab dissociates from TNF-alpha with a Kd of lx10 power -8 M or less and has a Koff rate constant of lx10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro L929 assay with an IC50 of lx10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple sclerosis, autoimmune diabetes, autoimmune uveitis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The Ab also inhibits TNF-alpha induced expression of endothelial cell leukocyte adhesion molecule-1 (ELAM-1) on human umbilical vein soccuence 12 Ab.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

THIGH affinity antibodies against human TNF alpha - useful TNF alpha activity, e.g. to treat autoimmune diseases and TNF alpha activity, e.g. to treat autoimmune diseases and Sclaim 9; Page 65; 102pp; English.

Claim 9; Page 65; 102pp; English.

C The present sequence is a novel anti-human tumour necrosic factor-alpha (TNF-alpha) antibody (Ab) heavy chain complete determining region 3 (CDR3).

C The Ab dissociates from TNF-alpha with a Kd of 1x10 power less and has a Koff rate constant of 1x10 power - 3s power less and has a Koff rate constant of 1x10 power - 3s power less and has a Koff rate constant of 1x10 power - 3s power less and has a Koff rate constant of 1x10 power - 3s power less and has a Koff rate constant of 1x10 power - 3s power less and has a Koff rate constant of 1x10 power - 3s power less and has a Koff rate constant of 1x10 power - 3s power less and has a Koff rate constant of 1x10 power - 3s power less and has a Koff rate constant of 1x10 power - 3s power less and has a Koff rate constant of 1x10 power - 3s power less and has a Koff rate constant of 1x10 power - 3s power less and has a Koff rate constant of 1x10 power - 3s power less and has a Koff rate constant of 1x10 power - 3s 
                         less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro L929 assay with an ICSO of 1x10 power -7 M or less. The Ab. whice inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gotty arthritis, altergy, multiple sclerosis, autoimmune diabetes, autoimmune uveitis or nephrotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Anti-TNF-alpha antibody heavy chain CDR3;

PT High affinity antibodies against human TNF alpha - useful to inhibit PT TNF alpha activity, e.g. to treat autoimmune diseases and cancer PS Claim 20; Page 74; 102pp; English.

CC The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity CC determining region 3 (CDR3).

CC The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or CC less and has a Koff rate constant of 1x10 power -3 s power -1 or CC less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro CC inhibits TNF-alpha activity, can be used to treat sepsis, CC autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy multiple CC syndrome, infectious diseases, malignancy, pulmonary, intestinal, CC cardiac or inflammatory bone disorders, bone resorption disease, CC sucrosis, periodontal disease, obesity and radiation disturbances, CC burns, reperfusion injury, kelold formation, scar tissue formation, CC andothelial cells (MTNF-alpha induced expression of endothelial cell cendothelial cells (MTNF-alpha induced expression of endothelial cell cendothelial cells (MTNF-alpha induced expression of endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         determining region 3 (CDR3).

The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and reutralises human TNF-alpha cytotoxicity in a standard in vitro 1293 assay with an IC50 of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, vital or fulminant hepatitis, coagulation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The Ab also inhibits TNF-alpha induced expression of endothelial cell leukovyte adhesion molecule-1 (FIAM-1) on human umbilical wein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 97-415302/38.
High affinity antibodies against human TNF alpha - useful to TNF alpha activity, e.g. to treat autoimmune diseases and collin 20; Page 74; 102pp; English.
The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) heavy chain complements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Allen DJ, Hoogenboom HRJM, Kaymakcalan Z, Labkovsky B,

PT High affinity antibodies against human TNF alpha - useful to inhibit PT High affinity antibodies against human TNF alpha - useful to inhibit PT TNF alpha activity, e.g. to treat autoimmune diseases and cancer PS Claim 16; Page 76; 102pp; English.

CC The present sequence is a novel anti-human tumour necrosis CC factor-alpha (TNF-alpha) antibody (Ab) heavy chain variable region. CC The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or CC less and has a Koff rate constant of 1x10 power -3 spower -1 or CC less (both determined by surface plasmon resonance), and CC neutralises human TNF-alpha cytotoxicity in a standard in vitro CC L929 assay with an TC50 of 1x10 power -7 M or less. The Ab, which CC inhibits TNF-alpha activity, can be used to treat sepsis, antoimmune diseases, e.g. rheumatoid arthritis, rheumatoid arthritis.

CC The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or CC less and has a Knoff rate constant of 1x10 power -3 s power -1 or CC less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro CC less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro CC less (both determined by surface plasmon resonance), and cc constant of 1x10 power -7 M or less. The Ab, which CC less (both determined by surface plasmon resonance), and vitro CC less (both section activity, can be used to treat sepsis, ca utoimmune diseases, e.g. rhematoid arthritis, rhematoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple CC syndrome, infectious diseases, malignancy, pulmonary, intestinal, CC cardiac or inflammatory bone disorders, bone resorption disease, CC clarosis, autoimmon diseases, malignancy, pulmonary, intestinal, CC cardiac or inflammatory bone disorders, bone resorption disease, CC claros, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The CC pyrexia, periodontal disease, obesity and radiation toxicity. The condthelial cells (HUVEC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

S Disclosure: Page 35-39; 59pp; English.

IgE heavy chain constant region (epsilon) genomic DNA. Another polypeptide; comprising the exon 5 and 6 product, is given in polypeptide, comprising the exon 5 and 6 product, is given in w23068. Recombinant peptides encoded by exons 1-6 can be produced in eukaryotic or prokaryotic cells. Such peptides, and antibodies raised against them, are used in methods to treat the manifestation of allergy in dogs, e.g. to treatment Type I immediate hypersensitivity, and for immunomodulation.
                                                                                                                                                                                                                                                                                                                                                                                                                       N-PSDB; T07310

The phage T7 gene 10 leader sequence product (R87027) is encoded by prokaryctic expression vector pTOPE-1b(+) (T07310). A fusion of the leader sequence and a putative ligand-binding domain (LBD), esp. antigenic region, of a protein is obtd. following insertion of putative LBD-encoding DNA into the vector. The fusion protein accumulates as inclusion bodies in Escherichia coli host cells and can be screened for its ability to bind a ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                31-MAR-1993; 040753.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PT of mycolic acid cyclo:proparating enzyme
PS Disclosure; Column 35-38; 35pp; English.
CC This sequence is encoded by ORF 2 of Mycobacterium tuberculosis (see
CC T46163). Three ORFs have been found all within a 7.2 kb BamHI fragment
CC isolated from M. tuberculosis, and are believed to be related to the
CC biosynthesis of mycolic acids. The ORF 2 gene product has homology to
CC known enzymes involved in the oxidative/reductive interconversions of
CC a ketone and an alcohol. It is most homologous (30 percent identity
CC over 188 amino acids) to actIII, beta-ketoacyl reductase from
Streptomyces cinnamonesis which is involved in chain elongation in
polyketide biosynthesis. Cycloproponation of mycolic acids distinguishes
pathogenic forms of mycobacterium from non-pathogenic forms. A method to
determine the ability of a cpd. to inhibit cycloproponation of mycolic
acids in pathogenic mycobacterium is claimed.

PRRSV isolate 14/96 nucleocapsid/phage T7 gene 10 fusion protein.
Nucleocapsid; Porcine Reproductive and Respiratory Syndrome Virus; PRRSV;
p1g; serum; RT-PCR; reverse transcription; amplification; fusion protein;
primer; bacteriophage T7; gene 10; E coli; immunoassay; diagnosis.
Chimeric - Porcine reproductive and respiratory syndrome virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  T 15
W68459 standard; protein; 386 AA.
                                                                                                                                                                              Sequence

MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm

Thu Sep 2 12:37:02 1999; MasPar time 1.38 Seconds 88.598 Million cell updates/sec

abular output not generated.

Description: Perfect Score: Title: >US-08-599-226\_30 (1-12) from US08599226.pep 69 1 ASYLSTSSSLDD 12

Sequence:

Scoring table: PAM 150 Gap 15

Searched: 106580 seqs, 10152877 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: 1:5A\_COMB 2:5B\_COMB 3:PCT9\_COMB 4:backfiles1

Statistics: Mean 15.800; Variance 47.088; scale 0.336

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
